Rebolting Hearts
Sponsorship Proposal

About Rebolting Hearts

Rebolting Hearts is a non-profit association dedicated to organizing international events and training camps where women learn, from women, how to rebolt, equip, and maintain climbing cliffs.
Our events provide participants with hands-on training in the maintenance of existing climbing routes and, depending on their experience and the local context, the opportunity to equip new routes under supervision or independently.
Our goal is to promote more sustainable climbing practices while reducing the environmental impact of climbing development. By maintaining and rebolting existing cliffs, we aim to reduce the need to develop new natural areas for climbing.
We also seek to limit the carbon footprint of our activities by carefully considering travel, equipment transportation, and local logistics wherever possible.

Our Values

Rebolting Hearts is a feminist, inclusive, and non-profit organization.
We believe that everyone should have equal access to climbing knowledge, technical skills, and opportunities to contribute to the development and maintenance of climbing areas.
We are committed to promoting:

- Equality and inclusion
- Knowledge and skills sharing
- Environmental responsibility
- Sustainable climbing development
- Autonomy and leadership within local climbing communities

First Project: Women's Rebolting Training in Morocco

The Moroccan female climbing community has recently raised concerns about women's access to technical training in rebolting and route development.
In response, Rebolting Hearts is working together with climbers from Casablanca to organize a one-week training camp for Moroccan female climbers.
The project will provide participants with the opportunity to:

- Learn the fundamentals of rebolting and route maintenance
- Develop practical skills in a real climbing environment
- Learn how to safely equip climbing routes
- Build confidence and leadership skills
- Become more autonomous in the maintenance and development of their local climbing areas

Our aim is not simply to organize a one-off training, but to support the development of local skills that can remain within the Moroccan climbing community after the event.

The Event

Location : Gagou climbing crag, near Casablanca, Morocco
Duration : 1 week
Participants : 6 Moroccan female climbers
Training days : 5 days
Professional instructor : 2 to 3 depending on the number of participants

During the week, participants will receive both theoretical and practical training. They will work directly on existing routes and learn how to assess, maintain, and rebolt climbing routes safely.
The project currently aims to rebolt approximately 25 routes while providing six participants with the equipment and knowledge needed to continue contributing to route maintenance in the future.

Why Support Rebolting Hearts?

Supporting this project means contributing directly to:

More sustainable climbing
Maintaining existing climbing areas can help reduce pressure to develop new natural sites.

Women's access to technical skills
The project creates a dedicated space for women to gain technical knowledge and practical experience in a field where access to training can be limited.

Knowledge sharing
The skills acquired during the training can be shared within the local climbing community, helping create a longer-term impact beyond the event itself.
Safer climbing infrastructure
Rebolting aging routes helps maintain climbing infrastructure and contributes to safer climbing areas.

International climbing connections
The project brings together climbers from different countries and communities around shared knowledge, skills, and environmental responsibility.

Project Budget

The estimated budget for the project is €8,545.

1. Transportation
Transportation costs include the movement of equipment and participants to and from the climbing area. It is not yet done, but up to €4058. Will be finished soon.

2. Training Kits
The project will provide each of the six participants with the essential personal equipment required for the training : €2291.

3. Rebolting & Route-Development Materials
The project plans to work on approximately 25 existing climbing routes : €3149.

4. Professional Training
A professional instructor will lead the training and supervise the practical work throughout the week : €1600.

Here you will find at the end of the document the sheets to check our detailled previsionnal expenses.

Sponsorship Opportunities

We are looking for **partners** who would like to support the development of women's technical skills, sustainable climbing practices, and the maintenance of existing climbing areas.
Sponsors can contribute by supporting:

- Equipment and training kits
- Rebolting materials
- Professional instruction
- Transportation and logistics
- The project as a whole

Financial contributions are not the only way to support the project. We are also interested in equipment sponsorships and in-kind partnerships with climbing and outdoor companies.
Every contribution will directly support the organization of the training and the development of technical skills within the Moroccan climbing community.

Get Involved
By supporting Rebolting Hearts, you help create opportunities for women to become active contributors to the maintenance and development of their climbing areas while promoting a more sustainable approach to climbing development.

Women supporting women. Skills shared. Cliffs maintained.
